TechWizard™ has an easy to use recipe entry feature. Use TechWizard™ to prepare a nutrition label and ingredient declaration for any food product.

Formatting for trans fat is part of the Nutrition Facts created using TechWizard™.

TechWizard™ easily produces a nutrition content sheet or a complete nutrition label with the required format for a given formulation including the ingredient declaration statement. This information can be printed or copied and pasted to other programs such as Microsoft® Word or label printing software.

Sub-formulas can be easily created, stored in the ingredient database, and added to new formulations. Additionally, the serving size can be recalculated based on air inclusion.

TechWizard™ can adjust the moisture and/or fat content of ingredients or finished products. This makes it much easier to calculate the nutrition of cooked, dried, fried, and dairy products.

Users can quickly create a Nutrition Facts based on formulating for a final composition.

Formulas created using TechWizard™ can be saved for later retrieval. The user can have an unlimited number of formula archive files.

The user has complete control of the ingredient database. At any time new ingredients can be added to the database. The entire USDA Food Composition database (5976 items) is also provided.
