

Viewing Formulas that Contain a Particular Ingredient in Production Wizard™

This feature allows the user to view a list of ingredients that are used in all the formulas found in a particular formula file. The user can select one of these ingredients from the list and view each formula that contains that ingredient.

Click on the **File** menu. Select **Replace Ingredient in Config. Formula File** from the **Config. Formula Files** menu.

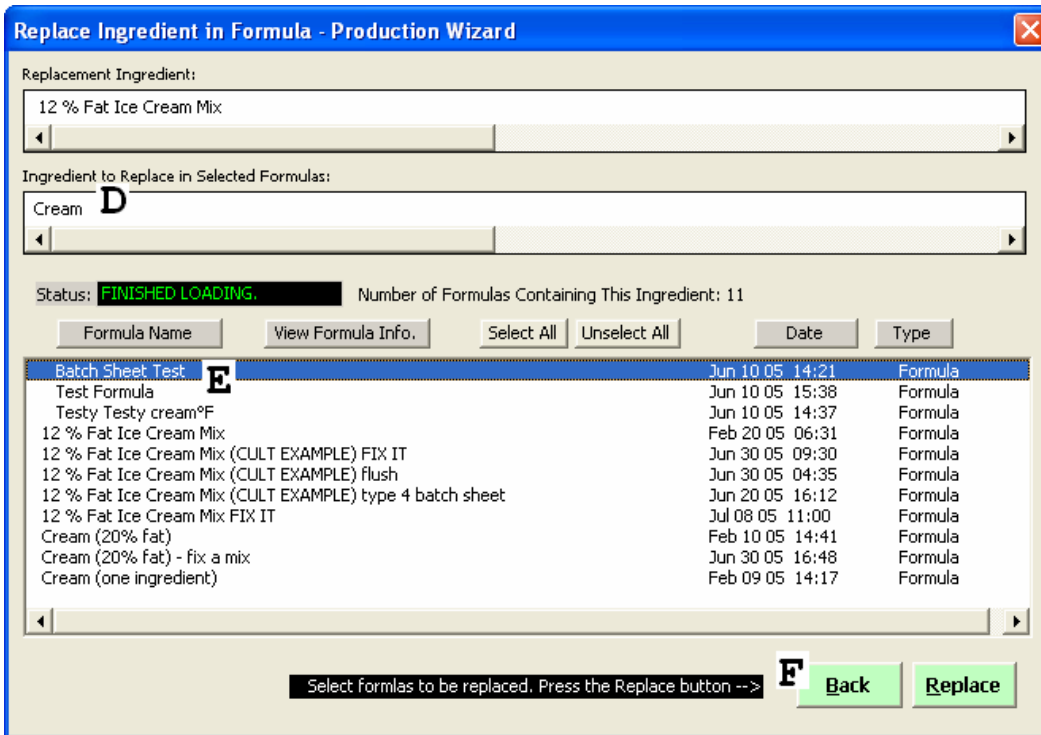

The **Replace Ingredient in Formula** window appears. In this case, we do not wish to replace an ingredient in the formulas. Instead, we will use this form to review which formulas contain a particular ingredient.

Click on the **Select Source Ingr. File** button (A) and select any ingredient file.

Click on the **Select Formula File** button (B) and select the file of interest.

To see a list of formulas that use a particular ingredient, select the ingredient (C) and press the **Continue** button (D).

Replace Ingredient in Formula - Production Wizard
