

Creating a Graphics File for a Nutrition Facts

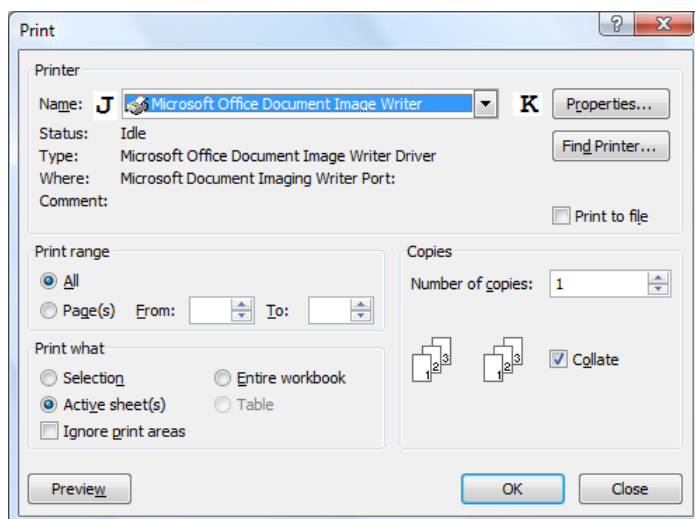

There are a variety of ways to create a graphics file for a Nutrition Facts. The user can print the Nutrition Facts as described in the previous section then scan the camera ready document using a scanner. The user can print a pdf document of a Nutrition Facts then import it into Adobe® Illustrator®. The user can copy the Nutrition Facts and paste it as a picture in a variety of Microsoft® Windows programs.

The following describes how to output a Nutrition Facts to a TIFF graphics file using the Microsoft® Office Document Image Writer. If you require an inexpensive PDF or Graphic print driver we recommend the Universal Document Converter (learn more at <http://www.print-driver.com>).

Creating a TIFF Graphics File for a Standard Label

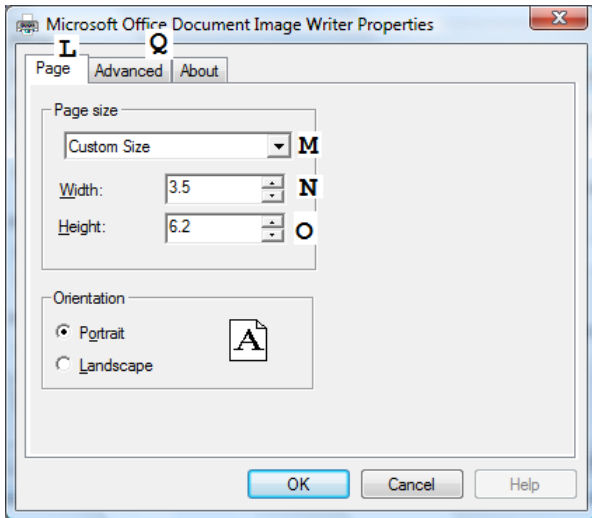

Creating a graphics file for a label is fairly straightforward. The user outputs the label to an Excel file configuring the file for output to a graphic file, opens the label Excel file, and sets up the document and printer settings to use the Microsoft® Office Document Image Writer, and saves the TIFF file. The following instructions provide details on how to do this.

1. The label should be output to an Microsoft® Excel file. The key steps for saving a Nutrition Facts to an Excel File are:
 - a. Create the Nutrition Facts and when viewing the label press the **Print Label** button.
 - b. The Nutrition Label Report window appears. Select the **Nutrition Label** Option.
 - c. Click the **Save to Excel File** button.
 - d. When prompted to configure the file to output to a graphics file answer yes. Provide a name for the file and save.
 - e. The user is prompted with instructions on how to set up printer settings.
2. Open the file in Excel, not in TechWizard™. The file is typically stored in the \TchWzV4\reports folder.
3. Select printer and enter printer settings.
(Excel 2000 – 2003) Select the **File** menu and click **Print**.
(Excel 2007 or higher) Click the round **Office** button, select **Print**, and click **Print**.
4. The Print window appears (**see figure below**).
5. Select Microsoft® Office Document Image Writer in the dropdown (**J**).

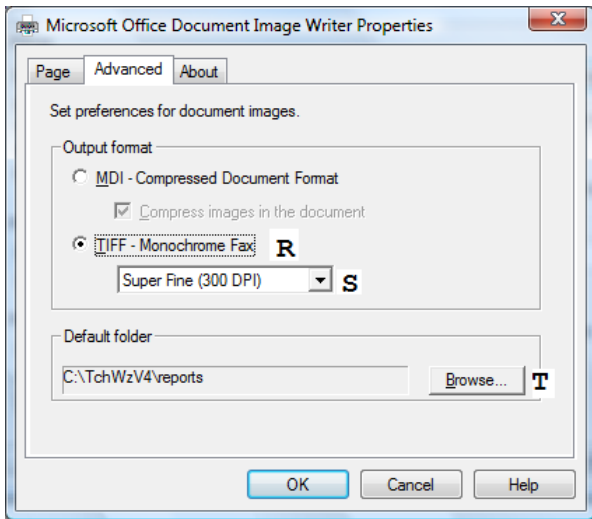

6. Press the **Properties** button (**K**). The Properties window appears (**see figure below**).

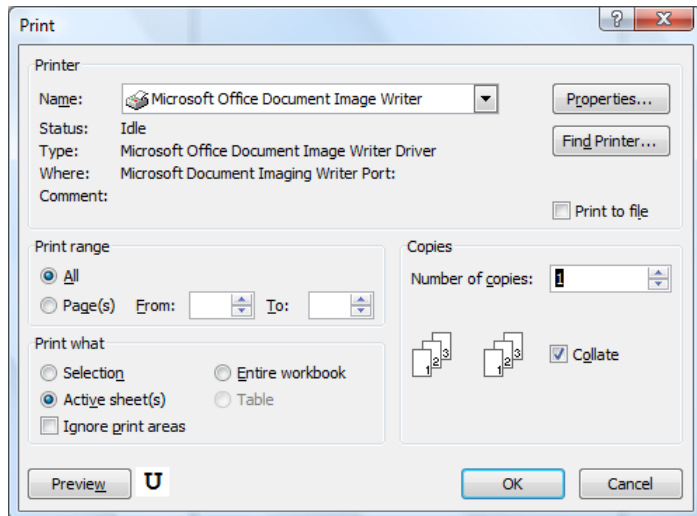

- Set page size to Custom Size (**M**), set width to 7 (**N**) and height to 13 (**O in figure below**). Note if you have included more nutrients than the standard you will need to make the page height larger.

- Click the Advanced tab (**Q in figure above**).
- In the Advance portion, select the TIFF – Monochrome Fax (**R in figure below**) option and resolution to **Super Fine (300 DPI) (S in figure below)**.
- Click the **Browse** button (**T**) to set folder where the TIFF file will be saved. Click **OK**.

- Click the **Print Preview** button (**U in figure below**) to view the output. Further adjust the page size as needed. When you print the document you will be prompted to provide a file name. You can also save the modified Excel file.

Creating a TIFF Graphics File for a Standard Label (No Footnote)

1. Follow the steps in the section, *Creating a TIFF Graphics File for a Standard Label* with the following changes.
2. In step 7 set page set width to 7 and height to 10.4.
